INTRODUCTION

Hi, I'm Jonathan, I am a experienced UX Designer / Developer based in Staffordshire. I have over 7 years experience working in a variation of different roles involving design and development.

Having the ability to develop my designs has led to being experienced as a developer as well as being a skilled designer proficient in the Adobe Suite. I have been working with UX techniques including wireframes, prototyping, user journeys and personas in multiple roles.

My roles have been varied, from design and development through to being part of the tender process for new supplier and leading marketing projects which feature on corporate websites.

During my roles I have used the SASS and LESS CSS frameworks, I have worked in Agile environments and with BDD and TDD processes. I am also familiar with source control tools like GIT and task automation tools such as gulp.

EXPERIENCE

UX DESIGNER / DEVELOPER

Perform Group, Birmingham | August 2015 - Present

My role at Perform Group is a UX Developer, the role involves all of the design work for the product stack as well as building and implementing the front-end code. The day to day duties involve designing and building the web applications the companies offers to clients, I work closely with the Product Owner to create wireframes and designs of new features or applications for the system. Once designs are agreed I then build prototypes using HTML/CSS and Javascript, after which I help integrate the designs into the system.

I work closely with clients to help improve and develop the design and overall user experience understanding reviews and creating a development priority timeline.

Other responsibilities at the company involve creating new branding assets, logos and icons as well as designing email templates and print assets when required.

WEB DESIGNER/DEVELOPER

University of Wolverhampton, Wolverhampton | January 2013 - August 2015

My role at the University was in the Marketing and Communications department as a member of the Digital Marketing Team. Although the job title was web developer, the remit of the role was much wider and included all of the design responsibilities for the website. I was the only designer involved in the redesign of the university's website into a modern responsive site in 2014.

During the time at the University I worked closely with various stakeholders throughout the business as well as being involved in the tender process for a new CMS supplier for the new website. I also had experience in managing Interns during my time at the University, allocating work and assessing them periodically

WEB DESIGNER

Mercato Solutions, Birmingham | September 2012 - December 2012

My role as a web designer at Mercato involved designing a responsive website to replace one of their largest currently operational websites, I used photoshop to design and built prototypes using HTML, CSS and JavaScript, once built I assisted in integrating the designs into the chosen CMS.

JUNIOR WEB DESIGNER

Welding Supplies Direct, Albrighton | February 2011 - September 2012

My responsibilities included maintaining the current website as well as developing a fresh look and feel for the site moving forward.
